Find out the exact software serial key or your ETS4 license code to start the software.Q: Terrier: how to determine the accuracy of the presented data I'm using Terrier to build a sparse graph that represent links between items in a list. There are thousands of items in the list. And each of these items has a relative number of people that have information about that item. Each edge indicates how many people in a certain proximity of the item have that item. And the items with high edges are items that have many people information on it. My question is: Is there a way to know if the number of edges of an item represent the real number of people
