I strongly believe that the order of the releases of Microchips MPLAB XC8 were a reflection of its development plans. In other words, the compiler was developed to be more like the MPLAB PRO C compiler in that it did not include all of the features of the full language. MPLAB X IDE v4.2 is released over two years after version 4.0. Its available for download from Microchips Download Site. You can use the command line to activate/update the XC8 Compiler if you wish but it is not required. However, it is strongly recommended that you use MPLAB XC8 v4.2 with the latest version of the MPLAB X IDE. Dont waste your time browsing for examples. Let them come to you. New Project Explorer window leads you to your projects. It displays all of compilers many included examples by default. But simply point the path to any other folder and fast recursion-search algorithm will extract all of projects inside and will display a tree view of your project files up to any depth. Microchips provide free registration to their sites for three months after the release of any of their products. This was a great thing for me since I wasnt paying for the license to the newest version of the MPLAB X IDE but they were finally giving me the entire set of tools to work with the latest compiler. Unfortunately, I still waited weeks to get my license before I could update my compiler to the latest version.
