Warblade is a game whose main premise involves destroying a group of robots to create a hole in their defenses. Your ship is continuously bombarded by enemy robots and its health bar is depleted, so that you need to get as many shots as possible to destroy them. It is kind of like that game “Ikaruga,” although it has been popularized more in recent years. In addition to destructing the enemy robots, you can collect gems as you shoot them off the screen, although there’s no point in doing so as they cannot be used to upgrade the main ship’s weapons. Warblade will not only test your reflexes, but will test your mind as well. As you progress through the levels, your ship’s health decreases – and if it is depleted, it will explode. The mobile version of the game features eight difficulty levels, so if you would like to up your game, you can try each one. I’m always on the lookout for new great mobile games, and I am pretty picky when it comes to these types of games. I like the game, but I don’t like the fact that it uses the “keep your game” technology. Games that use this technology can be frustrating if you need to pause your game and you are not finished. So, if you are a game lover like me, you might want to keep your free trial on the lookout. You might be very pleased with the game! The mod is part of a larger project. You can explore some other parts of the mod, such as size-related stuff, and change many things in the Minecraft world. I'm planning to add many other mods in the future, and I will make it available when the mod is well-tested and stable enough! Check the Mod Details.
