If you find any bugs or have any improvement requests, please email me at autumoon.opensource@gmail.com --
Automatic IP update I have written an application that will automatically update

your computer's IP address via Windows update service. It is based on the Microsoft updater service. The updater service is pre-installed in Windows and it is able to update the IP address of your machine. The application requires the administrator privileges to run. The application displays the IP address. It is possible to choose a certain IP address as your current one. The application will connect to the updater service and start a scheduled update to the IP address. Usage Install the application on your computer. Click the Start button on the application screen. Click the Install button. Click the OK button to continue with installation. Click the OK button to accept the license agreement. Click the Start button to start updating. When done updating, click the OK button. Click the Start button to stop updating. Screenshots

Autumoon IP Informer is a utility for sending an email to the account when IP address is changed. You can input IP address, account name of the account, address of the sending mailbox and the password of the sending mailbox and click OK button. Autumoon IP Informer is easy to use and very practical in supporting the dynamic IP. You do not need to log-in to your account again when your IP has been changed. This is a very great and useful program for all system users who have the dynamic IP. Please contact me in case you have any questions or suggestions. What's New in the Autumoon IP Informer?

===== The Auto
Informer is the application that checks the
IP address to tell you the dynamic IP
address. It supports the Microsoft Outlook
and Outlook Express, when you are away
from your home network, and then the IP
address changed, it will send email to you
to tell you the new IP address, or if the IP

address is incorrect, the application will also send email to tell you. Why you need the Auto Informer

=====

There are many ways to know the IP address, but some of them may send emails to wrong inbox, or not send emails at all.

But the Auto Informer can send you the email only when it's changed. Therefore, it can be helpful for you to know the current IP address without doubt. Informer

Features ===== 1. It can send email to the internal IP address only, if the private IP address is changed, the application won't send you email. 2. It supports the Microsoft Outlook and Outlook Express. 3. It's small and easy-to-use. 4. It's free! Note ===== 1. The software was tested and compiled in Windows 2000, Windows Server 2003, Windows XP and

Windows Vista. 2. The software was tested and compiled in the 32-bit operating system, but it will also work in the 64-bit system. 3. The size of the Auto Informer is only 1.03 MB. 4. The program is a portable application. 5. You can't uninstall the program manually. 6. You can't run two Auto Informer at the same time, because both of them will use the same private IP address. 7. Please make sure that the application receive email from the remote server before sending email to the remote server. 8. The first time you run the program, it will prompt you to receive the notification email, please choose whether to receive the email or not. 9. It won't be received if the remote email server hasn't any response to your notification email. 10. The application doesn't support the Gmail. 11. The application will send email only

once, but you can use the program to find the new IP address as many times as you want, just make sure that you'll check the inform box the next time before you run the program. 12. If you don't input the receiving mailbox address or the receiving smtp server, you can't receive the email, the sender's mailbox is not the same as the receiving mailbox, this will let you receive the emails when you are away from your home network. 13. If you set the receiving mailbox address to "email@xxx.com", then it will be email to email@xxx.com automatically, you can't use this option. 14. If you set the receiving mailbox address to "email@xxx.com", and also you input the
