Cut and paste is one of the most important feature in Photoshop CC. There are so many reasons to use Cut and Paste, for example, you can combine multiple photos into a single picture. If you are looking to extend the life of a camera battery, then preserving battery life is one of the most important things. If you have different photos that you need to edit, saving time is an important feature. And lastly, you can share your creative work with others in a matter of seconds. Since every user can review and edit the existing comments box, the content is constantly changing. The reviews, which you can save and share, are tied to the PSD, moment by moment, and you can share that link with friends or anyone else who views, creates, or comments on it. Unless you update your PSD frequently (every few hours is good), the auto-help preview of what a changed PSD will look like isn't very accurate. So, you needn't worry about losing out on changes that aren't shown in the preview. The review is displayed after you have successfully saved the PSD. Done so, you're given the option to share the file with others and even to share it for only reviewing. Once you sign in, the review is center stage, unrelated to other documents open in your image library. The comments can be review, saved, or saved for future review. New comments are displayed on top of the comments already in the document. Share a link for viewing the PSD, or post the link with a comment. Then, when you return and view the file, the comment appears.
