Hello,

I've been using photoshop today for the first time since it was released and I must say I am very impressed. Easy to use, fast and powerful. I found the program works much better than Paint Shop Pro 11. The basic looks are pretty good but I have used Painter for a long time and the interface looks much better than photoshop, but I have to be honest after all the complaining of the last few years I am happy to see an improvement and it is fast too. I am very happy with the preview application after seeing it on my laptop. I like the idea and for the price they are offering it's a good price, but in a time where new hardware is becoming even cheaper for the consumer, one still has to remember that not everyone can afford a new computer. I understand why fotoshop is so expensive to begin with and I wish it would be offered to the public like Powerpoint.

Photoshop is best suited for replicating the look of images that are already on the web, (rather than producing something new from scratch. This task, however, doesn't require the range of digital image effects that Photoshop can deliver). The most useful feature of Photoshop is its ability to quickly apply and manipulate the look of any photo. This is one of the key reasons why it's so popular. While evidence of a lot of this part of the tool can be found on SubtleStockStock, this is the best place to find images from Creative Community submissions to showcase their use case. Photo Essays, provided by **Creative Publishing International**, are an excellent use case for this process as they allow designers and illustrators to showcase their skills as they work. It's easier to categorise and find photographs in an album than on Pinterest and there's a lot of them, so here's where to find the best and most useful ones. There's so many photo sites that there's backlinks in almost every corner, but perhaps the greatest strength is the sheer volume of content available. Just about anything and everything can be found on the site.

Professional photographers use photo editing software for a number of reasons. The software for photo editing has come a long way in recent years, so that professionals can spend less time perfecting their images and more time doing what they do best: taking beautiful photographs. In today's context, the most influential practitioners are often those who are able to merge their creative and technological skills. They function using new technologies and are able to work spontaneously, bringing concepts to life. They don't refer to themselves as artists because their subject is the act of creation itself, not art for art's sake. They are inspired in the moment and in the process; they aren't chained to the language of 'art' or 'design.' These experts have a sense of intuition that comes with mastery of the photographic world, and they seamlessly integrate the craft with technology to create intuitive and elegant digital products. The term 'artist' may conjure images of an image laborer who slavishly rolls out images and who has achieved a niche. In our context 'artist' means an individual who is more interested in the craft; they may be the photographer whose skills are defined by skill with technology—they may use Photoshop to change the way an image looks or use Lightroom to enrich it. This is the artistic path that many are taking today. Being a photographer is not the only path that new artists can take; many choose to become composers, or to focus on writing and creating. You may even choose to be a product designer, working with a website that's not code-driven. The choice is up to you—you just need to make a decision.
