After you download and install the Adobe Photoshop software, you need to crack it. This can be a bit of a daunting task, but there is a method to crack the software. Thankfully, the iPad Pro supports dozens of productivity apps. If you're a student, it's a good idea to leverage apps that you can tweak and customize, instead of relying on the standard out-of-the-box apps that are available on iOS. I'm not necessarily a fan of the Windows Store because of what I perceive as Microsoft's high subscription fees and failure to provide the most basic apps to consumers. But I could definitely see a lot of value in a curated, enterprise-based system. Apple, by contrast, has an entrepreneurial streak and is able to try new things that have little or no risk. While critics may point to problems that have occurred in the past, I'd like to know what those are – not just complain that the App Store isn't perfect. The biggest issue for Pro users is the lack of enterprise-level support for Mac software. Virtual machines? Apple offers that for free. VMWare has a Workstation client that works flawlessly, including the ability to remotely control it from one's iPad. In my case, I have the full desktop version of Adobe Master Collection installed on my Mac and it works great, which is a great value. In conclusion, I like the iPad Pro, and have been happily using it as a secondary computing device since the summer. Obviously, it's not as powerful as a MacBook Pro, which I still use as a primary productivity device, but it's just what one may need.
For what it's worth, I would say that you need to keep this device away from your kids, because they're going to destroy it. They're clumsy enough with a parent's tablet.
