Lens Correction lets you remove distortion and get rid of bubbles in the glass itself. For example, if you're using a fast or wide angle, you may see the corners start to "pop." **Lens Correction** can also straighten curved or wide angles to zoom in closer. Or, you may want to use **Lens Correction** and **Lens Distortion** to create a creatively composed image. **Lens Correction** will alter the pitch of the image to correct for barrel and pincushion distortion. Use it as a last resort, as this won't correct the sharpness overall. (If you just can't get the images you want in Photoshop, **Resolution** could be the answer.) All the blending options we have shared in this tutorial, go under the Adobe name. There are a number of blending options, such as the Highlight Layer option, that are fairly self-explanatory. To see which tool is which, just hover over the option you want to use. They are self-explanatory and you don't have to worry about using the exact same one a million times. Now, let's go and talk about some specific blending options. Intermediate users should be able to follow along with the tutorial as-is. New users may want to seek out some creative cloud training as they learn the essentials. For example, we have a tool called Motion Blur, which is a very easy way to add a

dreamy feel to an image. It does so by blurring the edges of your image. e3d0a04c9c
